

WHERE DO OUR THOUGHTS COME FROM?

Science explains thoughts as sparks of neurons—electrical signals shaping patterns in the brain. Yet what we experience feels richer: a sudden memory, an intuition, an idea that carries meaning far beyond chemistry. In this gap between mechanism and mystery, we discover how much of thought remains unexplained.

Artificial Intelligence

What is Artificial Intelligence? What is the Turin Test? Can machines really feel emotions or do they just imitate them? Can machines make us less lonely

Human Intelligence

What is human intelligence? Is intelligence the same as your awareness, or is it problem solving? What does Psychology say about it? How can I use AI to be smarter?

Natural Intelligence

What if Human Intelligence is just part of a larger, natural Intelligence? What about intelligent animals? What would Intelligence look beyond words and rationality?

Dr Mathai Fenn

Educator and psychologist Dr. Mathai Fenn combines decades of teaching, research, and leadership to guide reflective exploration of intelligence and consciousness.

Explore the roots of AI

Turing test proposed that if AI can talk to us, it means it is intelligent.
But....

What is intelligence?
Is it different from Consciousness?
Are machines conscious?
Is your pet dog...?

Three kinds of intelligence = Artificial. Human. Natural. What are they?
